

# CAPITA

## UNIFI

Integrated Police records management

# The solution

Capita have a long history in successfully delivering market leading solutions to the UK Police service. What you may not know is that Capita supplies a market leading Records Management System (RMS), UNIFI, which covers a vast breadth and depth across operational policing. UNIFI has been designed for the UK Police service with the UK Police service.

UNIFI is a modular system that can be delivered and deployed in line with operational requirements and business change programmes. Capita understands that the delivery of an RMS solution requires more than just software. All of our UNIFI deployments are supported by a UK based implementation team which includes subject matter experts from operational policing to help bridge the gap between technology and business process.

## One version of the truth

UNIFI is based on a single shared POLE store (People, Object, Location, Event) with all data contextually linked. UNIFI uses a "search first, then create if need be" approach to creating new records ensuring;

- ❑ Reduced re-keying
- ❑ Removal of information silos
- ❑ Reduced data duplication and supporting data standards

UNIFI preserves multiple views of key records such as a person. This provides you with a wealth of intelligence as you can view the "last known details" of a person but also the details at a particular point in time providing more operational flexibility.

Each context is preserved and shown when viewing the connected record. All contexts are shown when viewing the Intelligence Nominal.

Searching uses all Context data

Police Contact Points

## Highly integrated

Capita's experience working across the entire criminal justice service puts us in a unique position providing us in-depth knowledge of national interfaces. Capita have applied this same level of detail to interfaces with local systems such as command and control.

In the management of critical incidents a small piece of information put into the UNIFI system will give me a complete picture of all the things I need to know to keep the public and officers safe.

Inspector Tony Rymer,  
Gloucestershire Constabulary

## Supporting change

Policing is continually subject to change, be it from legislation or the latest cost saving measures. Whilst UNIFI is highly configurable to help cope with small changes in process or procedure, Capita also actively support changes to the core application. Customer specific changes can be achieved in as little as three months! UNIFI is supported by an active national user group who help to drive cost effective change.

## Tailored deployment

UNIFI can be deployed in a way that works for you. This could be the traditional model of a local solution, a local solution backed up by a managed service, a hosted cloud deployment or multiple Forces hosted in one infrastructure. Choose the approach that is right for you.

## Natural progression

Capita's experience with NSPIS Case and Custody makes UNIFI a natural successor to the nationally deployed solution. UNIFI has built on the successful, proven delivery of NSPIS to create the best of breed RMS solution UNIFI. Capita are in a unique position to offer a full migration path from NSPIS to UNIFI supporting full records migration and de-duplication resulting in the full decommission of NSPIS.

## Current UNIFI customers

Devon and Cornwall

Ministry of Defence  
(National UK deployment)

Gloucestershire

City of London

Police Scotland

## Mobility and agility

At the heart of UNIFI is support for mobile and agile working. UNIFI has been designed to help break the tie between an officer and their desk. Activities such as custody prisoner reviews and stop & search reports can be performed through a range of applications and devices. UNIFI's mobile services simplify functions such as crime reporting to make them quick and easy to complete in the field.

## Key benefits and features

- ✔ Built in Intelligence charting for visual display of linked data
- ✔ Integrated business intelligence and management information framework
- ✔ Self-service portal for victims and witnesses
- ✔ Structured, Free text, Sound ex searching to ensure fullest search results
- ✔ Full migration of NSPIS case and custody data, full decommission NSPIS
- ✔ Interactive briefing module with "real time" updates
- ✔ Supports full electronic case file through a file /case builder and CPS 2 way interface
- ✔ Automatic PND updates
- ✔ Enquiry module to support public protection matters
- ✔ Automated MoPI advisor and weeding
- ✔ Integrated property and exhibits management
